

Lecture 1: Introduction to Artificial Intelligence

Artificial Intelligence (AI) is the field of computer science concerned with building systems capable of performing tasks that typically require human intelligence, such as reasoning, learning, perception, and natural language understanding.

Branches of AI

Major branches of AI include Machine Learning, Natural Language Processing, Computer Vision, Robotics, Expert Systems, and Planning and Search.

Turing Test

The Turing Test, proposed by Alan Turing in 1950, evaluates a machine ability to exhibit intelligent behavior indistinguishable from that of a human.
